### Explanatory Notes

This is a draft list of the Vascular Flora of the City based on the current level of data available through the Gold Coast City Council Flora and Fauna Database

### Ex = Exotic Species Status

an x in this column denotes an introduced species (ie. not considered native to Australia)

an N in this column denotes a species not native to the Gold Coast (ie. indigenous to other areas of Australia)

all other species are considered indigenous to some part of Gold Coast City

### Status = Conservation Status

END denotes a species listed as Endangered under the *Qld Nature Conservation Act 1992*

VUL denotes a species listed as Vulnerable under the *Qld Nature Conservation Act 1992*

RAR denotes a species listed as Rare under the *Qld Nature Conservation Act 1992*

CWS denotes a species not listed under the *Qld Nature Conservation Act 1992* but with a distribution otherwise considered significant within the City of Gold Coast

Abundance = an estimation of the abundance of this species with the Gold Coast City Council area

This list was compiled by Jason Searle with expert input by Mr Glenn Leiper & Mr Graham McDonald on the local distribution and abundance of the majority of native species. The list has also benefited greatly from recent flora survey work conducted by the Queensland Herbarium and additional information provided by local naturalists and community members
